

## Botany.

I. The only thing Prof. G. said about the ex. was that a great many will fail utterly; but someone who took the subject before from Prof. G. said there will be three questions.

1st - To describe a specimen critically.

2nd - Definitions

3rd - Protoplasm, cells, etc. from the book (which the class got about 2 weeks ago, - Wood's Botany, 95<sup>th</sup> ed. <sup>1914</sup>)

II. The class is now studying about the growth of cells - in the back of the book. They have taken the first three chapters in the book, also.

Dear Alice - This bit of information in regard to Botany was given me word for word by Miss Byrne.

I hope you won't apply the first statement personally. We miss you very much at college, Alice. And now that Edith doesn't come either, I feel almost deserted. In History, I sit over with the other girls, & in English, I have moved back to the

second row. How boldly we used to  
sit on the first row and challenge  
Prof. Laugel to question us. There  
goes 11 o'clock. I must read  
History. You must make your  
appearance at the Bertely Farm  
as soon as possible. Alice,  
Mr. Matiman looks lonely, Mr. Scoggins  
(or Scroggins) does nothing but walk pen-  
sively up and down the street, Mr.  
Meeker looks meeker than ever, and  
Mr. Wolf almost ceases to smile.  
Such calamities have no end while you  
are absent. The digs (?) are digging  
harder than ever of course, in view of  
the exas. We cut Gym. continually.  
Goodbye. Robin  
Hopes to see you soon.

Miss Alice Matrons, U.C. '94.
